

Road Management Plan

Adopted September 2021

Version 2.02

Schedule of Changes & Amendments

Version	Date	Changes/Amendment
Draft V1.00	1/11/2004	Adopted
V1.00	Nov 2013	Reviewed – consider Limited Access Rd adoption
V2.00	Dec 2015	Reviewed – refining road designation descriptions and service levels
V2.01	Oct 2016	Additions to align with MAV's Road Management Plan Guidance Doc May 2016
V2.02	Sept 2021	Changes made to tidy up language and response timeframes

NB:

1. Prime number changes to Versions (eg V1.00 to V2.00) will be made when the document undergoes its regular review and when significant changes are made to standards and guidelines for inspections, intervention levels or work
2. Point number changes (V1.00 to V1.01) will apply to minor amendments that do not materially impact the document and are intended only to clarify or update issues. Refer to Section 5.5.1 of the Council AM Strategy on reviewing & updating the plan and version numbering system.

Introduction

1.0 Purpose of the Plan

Towong Shire Council has developed this Road Management Plan (RMP) in accordance with Part 4, Division 5 of the Road Management Act 2004 (The Act).

The Road Management Plan identifies the roads for which Council is responsible and documents the management system in place to ensure that the road assets continue to be effectively maintained to provide a safe road network for the community.

- **Exceptional Circumstances**

Council will make every effort to meet its commitments under its Road Management Plan.

While Council will make every endeavour to meet all aspects of its Road Management Plan in the event of natural disasters and other events including, but not limited to, fires, floods, droughts or storms; or, a prolonged labour or resource shortage due to a need to commit or redeploy council staff and/or equipment elsewhere, together with human factors, such as availability of suitably qualified Contractors, Council reserves the right, pursuant to Section 83 of the Victorian Wrongs Act 1958, to suspend compliance with its Road Management Plan.

In this event, where the Chief Executive Officer (CEO) of Council has considered the impact of such an event on the limited financial resources of Council and its conflicting priorities, and determined that the Road Management Plan cannot be met, then pursuant to Section 83 of the Wrongs Act, the CEO will write to Council's officer in charge of its plan and inform them that some, or all, of the timeframes and responses in Council's Road Management Plan are to be suspended.

Once the scope of the event/s have been determined, and the resources committed to the event response have been identified, then there will be an ongoing consultation between Council's CEO and Council's Officer responsible for the RMP, to determine which parts of Council's plan are to be reactivated and when.

Council statements to residents about the suspension or reduction of the services under the Road Management Plan will include reference to how the work that will be done has been prioritised, and the period for which it is likely to be affected.

- **Key Stakeholders**

Stakeholders with an interest in this Road Management Plan include:

Stakeholder	Level of Consultation	Type of Consultation
Road users: require a safe and efficient transport network	Inform	Council Website Towong Shire Council Facebook Signage at specific sites as required for hazard reduction
VicRoads: the Coordinating Road Authority for freeways and arterial roads within the Shire	Inform	Council Website Towong Shire Council Facebook Signage at specific sites as required for hazard reduction
Towong Shire Council: the Coordinating Road Authority for municipal roads within the shire, Council is also the Responsible Road Authority for sections of arterial road not used for through traffic	Inform	Internal Email
Adjoining Municipalities: the Coordinating Road Authorities or Responsible Authorities for municipal or non-through traffic areas of arterial roads where they cross Local Government boundaries within the state of Victoria	Inform	Council Website Towong Shire Council Facebook Signage at specific sites as required for hazard reduction
Other Road Authorities: Department of Environment, Land, Water and Planning, Parks Victoria (Goulburn-Murray Water has not been declared under legislation to be a road authority)	Inform	Council Website Towong Shire Council Facebook Signage at specific sites as required for hazard reduction
Utilities: service authorities which have assets for the provision of water, sewerage, gas, electricity, telephone, telecommunication or other like services located on roads	Inform	Council Website Towong Shire Council Facebook Signage at specific sites as required for hazard reduction

Emergency Service Agencies: (Police, Fire, Ambulance, SES)	Inform	As per Municipal Emergency Management Plan
State and Federal Governments that periodically provide support funding to assist with management of network	Inform	Council Website Towong Shire Council Facebook Signage at specific sites as required for hazard reduction
Residents and business owners within the road network	Inform	Council Website Towong Shire Council Facebook Signage at specific sites as required for hazard reduction
Pedestrians including those with disabilities and the elderly with restricted mobility	Inform	Council Website Towong Shire Council Facebook Signage at specific sites as required for hazard reduction
Users of a range of miscellaneous smaller, lightweight vehicles such as cyclists, mobility scooters, wheel chairs and prams etc	Inform	Council Website Towong Shire Council Facebook Signage at specific sites as required for hazard reduction
Vehicle users such as trucks, buses, commercial vehicles, cars and motorcycles	Inform	Council Website Towong Shire Council Facebook Signage at specific sites as required for hazard reduction
Tourists and visitors to the area (for recreation, sport, leisure and business)	Inform	Council Website Towong Shire Council Facebook Signage at specific sites as required for hazard reduction

- **Purpose of the Road Management Act 2004**

The purpose of the Road Management Act is to reform the law relating to road management within Victoria.

It sets out the rights and responsibilities of road users and the responsibilities of Road Authorities for the management of roads.

- **Road Authority Responsibilities**

The Act includes provisions for:

- The making of road management plans as part of the management system to be implemented by a road authority,
- The keeping of a register of public roads in respect of which the road authority is the coordinating road authority,
- The construction, inspection, maintenance and repair of public roads,

- Issues relating to civil liability arising out of road management.

- **Duty of Road Users**

Road users have a duty in respect of the use of a public highway.

The Road Management Act, Section 106, refers to the obligations of road users as set out in Section 17A(1) of the Road Safety Act 1986 as follows:

- A person who drives a motor vehicle on a public highway must drive in a safe manner having regard to all relevant factors including (without limiting the generality) the-
 - Physical characteristics of the road,
 - Prevailing weather conditions,
 - Level of visibility,
 - Condition of the motor vehicle,
 - Prevailing traffic conditions,
 - Relevant road laws and advisory signs,
 - Physical and mental condition of the driver.

- **Relationship to Corporate Plan**

The Council Plan 2021-2025 defines Asset Management as one of its Key Result Areas with the strategic goal "to maintain and improve the Shire's infrastructure to meet agreed levels of service." A copy of the Council Plan is available for inspection at the Council Offices.

Council's asset management strategy includes:

- Maintaining and implementing Asset Management Plans for each class of asset
- Conducting condition assessments for each class of assets every 3 to 5 years
- Periodically reviewing levels of service by community consultation to ensure sustainability
- Preparing Financial Plans to fund identified renewal targets

- **Asset Management Policy**

Council has an Asset Management Policy. The policy states how Council will fulfil its stewardship obligations for the management of assets by:

- Developing, implementing and maintaining an asset management strategy;
- Delivering sound asset management practices;
- Developing and reviewing asset management plans for each asset class;
- ;
- .

A copy of the Policy is available for inspection at the Council Offices.

- **Roads Asset Management Plan**

Council has developed Asset Management Plans for the Road Network including roads, bridges and footpaths.

This plan will set the renewal intervention targets for road assets based on condition assessments to be conducted every 3 to 5 years.

The Moloney Asset Management System is being utilised by Council to predict the future funding required for the renewal and replacement of road infrastructure, as well as the projected annual maintenance demand. If renewal targets cannot be fully funded, maintenance costs will increase, or service levels will need to be reduced to meet the available budget.

- **Financial Plan**

The financial plan will develop a long-term strategy for funding of the renewal targets, taking account of the projected maintenance costs and available funding.

Council has a capital works database (CAPEX) which is reviewed annually having regard to the priority of projects and available funding.

2.0 Asset Description

2.1 Road Register

Council is the coordinating road authority for municipal roads.

The Register of Roads for which Council is responsible is appended as **Schedule 1**.

The roads on the register are those determined by Council to be **reasonably required for general public use**. The addition or removal of roads from the road register must be approved by Council.

2.2 Road Hierarchy

The hierarchy of roads established under the Road Management Act refers to State Roads, for which the Head, Transport of Victoria is the coordinating road authority, and municipal roads, for which Council is the coordinating road authority.

Municipal Roads have been classified as **link, collector, access, limited access** or **natural surface** roads in accordance with their function.

The following key principles have been adopted in developing the road hierarchy classification system:

- The classifications are functionally based. The function of the road determines its place in the hierarchy rather than traffic volumes or the current standard of construction.
- The classifications are generally consistent with the Austroads National Functional Road Classification system.
- Only those roads which are determined by Council as being "reasonably required for general public use" will be maintained by Council and included in the Register of Roads.

- Other roads, which may be available for public access but are not formed, or not constructed to an acceptable standard, will not be included in the road register and are classified as **natural surface** roads.
- Roads which are declared unused and licensed for the purposes of agricultural grazing remain the responsibility of the Department of Environment Land Water and Planning.

2.3 State roads

State Roads comprise freeways, arterial and non-arterial roads for which the Head, Transport of Victoria is the coordinating road authority .

Roads managed by the State within Towong Shire are:

- Murray Valley Highway including Hanson Street, Corryong
- Omeo Highway including Main Street, Eskdale and Main Street, Mitta
- Cudgewa Valley Road (Cudgewa – Tintaldra) including Main Street, Cudgewa
- Lockharts Gap Road
- Murray River Road including Main Street, Tintaldra and Main Street, Walwa
- Granya Road including Main Street, Granya
- Dartmouth Road
- Shelley Walwa Road
- Benambra-Corryong Road

2.4 Municipal roads

These are local roads which include all other urban and rural roads for which Towong Shire Council is the coordinating road authority, and are classified as shown in **Table 1.1** below:

Table 1.1 Municipal Road Hierarchy

Road Classification	Functional Definition	General Road Description and Performance
Urban Link Road Code - 4	Links and distributes traffic from local urban areas to the wider rural arterial roads. They provide: For a high percentage of through traffic; access to abutting properties, and; generally for higher traffic volumes. Urban Link Roads cater generally for Class 1 to Class 9 vehicles with Class 10 to Class 12 vehicles only via Council permit.	Year-round use road, sealed, 2-lane roads. Good quality surface, maintained to a high standard. Direct property access generally permitted. Typical design speed 60km/hr. Often marked with a centreline.
Rural Link Road Code - 1	Links and distributes traffic from rural localities to the wider arterial road network. They provide: Links significant towns, locations and industries; For a high percentage of through traffic;	Year-round use road, predominantly sealed, 2-lane roads. Good quality surface, maintained to a high standard. Roads of high local priority.

	<p>access to abutting properties, and; generally for higher traffic volumes, and traffic speeds.</p> <p>Rural Link Roads generally for Class 1 to Class 9 vehicles with Class 10 to Class 12 vehicles only via Council permit.</p>	<p>Direct property access generally permitted.</p> <p>Delineation provided by guideposts and often centreline marking on sealed roads.</p> <p>Typical design speed 60 – 100km/hr depending on terrain.</p>
<p>Urban Collector Road Code - 5</p>	<p>Collects traffic from urban residential areas and provides a feeder service on to Link roads. They provide:</p> <p>property access in urban areas; access to industries;</p> <p>A moderate percentage of through traffic, and;</p> <p>for moderate traffic volumes.</p> <p>Urban Collector Roads caters generally for Class 1 to Class 9 vehicles with Class 10 to Class 12 vehicles only via Council permit</p>	<p>Year-round use 2-lane road, usually sealed.</p> <p>Medium quality road surface, maintained to a good standard.</p> <p>Direct property access permitted.</p> <p>Typical design speed 50 – 60km/hr depending on terrain.</p>
<p>Rural Collector Road Code - 2</p>	<p>Collects traffic from rural residential areas and provides a feeder service to Link Roads. They provide:</p> <p>property access;</p> <p>access to minor locations and industries;</p> <p>For a moderate percentage of through traffic, and;</p> <p>for moderate traffic volumes and speeds.</p> <p>Rural Collector Roads cater generally for Class 1 to Class 9 vehicles with Class 10 to Class 12 vehicles only via Council permit.</p>	<p>Year-round use 2-lane road, usually formed and gravelled or single lane sealed road with gravel shoulders.</p> <p>Medium quality road surface, maintained to a good standard.</p> <p>Direct property access permitted.</p> <p>Delineation generally provided by guideposts.</p> <p>Typical design speed 50 – 80km/hr depending on terrain.</p>
<p>Urban Access Road Code - 6</p>	<p>Provides predominantly for direct access to residential properties and industries from a Link or Collector Road. They provide:</p> <p>for low traffic volumes and generally for low traffic speeds, and;</p> <p>For low percentage of through traffic.</p> <p>Urban Access Roads cater generally for Class 1 to Class 9 vehicles with Class 10 to Class 12 vehicles only via Council permit.</p>	<p>Year-round use road required for residential access only, may be sealed or unsealed and of varying width.</p> <p>Medium quality road surface, maintained to moderate standard.</p> <p>Typical design speed 40 – 60km/hr depending on terrain.</p>
<p>Rural Access Road Code - 3</p>	<p>Provides predominantly for direct access to residential properties and industries from a Link or Collector Road. They provide:</p>	<p>Year-round use road where required for residential access only, catering for 2-way traffic, usually formed and gravelled.</p>

	for low traffic volumes and generally for low traffic speeds, and; For low percentage of through traffic. Rural Access Roads cater generally for Class 1 to Class 9 vehicles with Class 10 to Class 12 vehicles only via Council permit.	Medium quality road surface, maintained to moderate standard. Delineation generally provided by guideposts. Typical design speed 40 – 70km/hr depending on terrain.
Limited Access Road Code - 7	Provides for access to rural non-residential properties only. They provide: for low traffic volumes and generally for low traffic speeds; Very low percentage of through traffic, and; Access for Primary producers.	Access is only guaranteed in dry weather for non-residential purposes Varying road width. Usually formed, sometimes gravelled in sections in rural areas. Low quality road surface maintained only on request within available budgets prioritised for the purposes of emergency services access and economic development/weather dependent. No delineation provided. Typical speed 10 – 50km/hr depending on terrain.
Fire Access Tracks	Provides for occasional fire access. A formed or unformed road consisting of locally available earth material with no imported processed gravel. Also, Fire Access Tracks can be a cleared, flat, bladed track providing seasonal access. Refer to Section 2.1.4 for details about maintenance on roads for fire access.	They typically include roads in rural areas, which are maintained at a basic level for occasional fire access. Low quality road surface maintained only when deemed necessary by Council in emergency situations. Typical speed 10 – 30km/hr depending on terrain.

*Definitions sourced from Victorian Grants Commission Questionnaire Manual

Road designation codes are sourced from an internal Towong Shire Council system

2.4.1 Municipal Footpath Hierarchy

Footpath Classification	Functional Definition	General Footpath Description and Performance
Commercial Area	Provides majority of access to CBD shopping and associated CBD facilities	Concrete footpath varying in width
Residential Area	Provides majority of access to residential properties	Multiple surface types including but not limited to concrete, bitumen or granitic sand
Off-road footpath and cycle paths	Provides longer recreational walking and/or cycling opportunities	Surface type bitumen or granitic sand varying in width

2.5 Fire Access Tracks

Some roads or sections of road that are not listed on the Register may be identified as fire access tracks where they provide access to Parks, State Forest, stream frontage or private land beyond the end of the maintained road network. These roads, although not regularly maintained by Council, may be graded occasionally to provide access for fire tankers. This work may be funded by contribution from CFA, DELWP, Parks Victoria or any other body.

These roads include:

- Hagertys Road
- Ley's Road
- Pooley Hill Track
- Saunders Lane
- Mt Alfred Track
- Snake Gully Track
- Settlement Track
- Packers Track
- Pub Track
- Wermatong Track
- Briggs Gap Road
- Mount Charlie Track

Water access tracks include:

- Langheims Rd
- Edgars Rd
- Tallangatta Creek
- McNamara Bridge

2.6 Other Roads

Some roads within Towong Shire are the responsibility of other road authorities as follows:

Department of Environment, Land, Water and Planning:

- Trappers Gap Rd
- Firebrace Track (from Granya Rd)
- Forest access roads through DELWP managed land
- Unused roads licensed for grazing purposes to adjacent landholders

Parks Victoria:

- Firebrace- Mt Lawson Rd
- Cudgewa Bluff Rd (thru National Park) (maintained by Council by agreement)
- Plateau Rd (First 500m from Georges Creek Rd by Council, Named Langheims Rd)
- Cottontree Reserve access (culvert at Webbs Ln by Council)
- park access roads

The following roads are the responsibility of Goulburn-Murray Water although they are not declared by legislation as a road authority:

- Lakeside Drive, Tallangatta
- Foreshore access roads, Tallangatta
- Horsfall (Six Mile Creek) Rd (from bridge at 0.925 Km)

Some Council managed roads are maintained by other authorities by agreement as follows:

- Bullhead Rd – within the Crown Land boundaries maintained by DELWP by agreement
- Cravensville Rd – maintained by DELWP by agreement
- Hempenstalls Rd – maintained by Hancocks Victorian Plantation (HVP) by agreement

2.7 Off-road footpaths and cycle paths

Section 40 of the Act provides that a Road Authority has a statutory duty to inspect, maintain and repair public roads including a pathway. A pathway is defined in Section 3 of the Act to include a footpath, bicycle path or other area constructed or developed by a responsible road authority for use by members of the public other than with a motor vehicle and as such may include pathways not located within road reserves.

To address this issue and comply with Section 40 of the Act Council will undertake to inspect, maintain and repair off-road pathways for which it is responsible which at this time is limited to the:

- walking path in Tallangatta adjacent to the high water mark of Lake Hume
- sealed surface of the rail trail from Tallangatta to the Sandy Creek Bridge. walking path on the Bellbridge foreshore from the Boat Club toilet block to the last shade shelter (refer to the register of public footpath)
- Tabor Walking Path in Dartmouth
- Eskdale walking path from town to the Recreation reserve
- River Road Walking Track, Walwa
- Walwa to Jingellic bridge track
- Tintaldra to Recreation Reserve
- Towong walking track from the Racecourse to the river
- Corryong Circuit Trail sections include Playles Hill and Cemetery creek
- Cudgewa from town to the Recreation Reserve
- Colac Colac walking track from Colac Colac to Corryong

References to these assets are made in Councils Register of Public Footpaths.

Management of Vehicle Crossovers (Driveways)

Vehicle crossovers refer to the crossing which provides access from the road to the property boundary including the lay back kerb. Whilst vehicle crossovers are considered to be private property and any damage to them is the responsibility of the property owner Council remains responsible for any section of the crossover that is used by the general public as a footpath. This section of footpath is subject to the same inspection and maintenance standards applied to other public footpaths. Should defects be identified within the area of driveway that is the property owner's responsibility and Council will inform the property owner of the identified defect and provide them with a timeframe in which to rectify the defect. Where a property owner's asset is presenting a hazard in an area of road or footpath that Council is responsible for the property owner should be notified and provided with a timeframe in which to rectify. If a property owner fails to remove the hazard within the specified timeframe Council will remove it and invoice the owner for the associated costs. This can include but is not limited to tree branches overhanging the footpath, gardens constructed on nature strips or any other protrusion from a property. Where a property owner elects to remove the hazard themselves, Council will monitor the situation until the hazard is removed. Any works conducted in a road reserve by an adjacent property owner will require a works within road reserve permit through Council.

2.8 Asset Registers

Municipal Roads

Council, as coordinating road authority for municipal roads, is responsible for the assets on these roads, including bridges, footpaths and kerb & channel infrastructure.

Council's Asset Management Systems holds registers of these assets. Summary extracts from the asset registers are provided as follows:

- Schedule 2: Bridges

Schedule 3: Footpath, Kerb & Channel

State Roads

The Head, Transport of Victoria is the coordinating road authority for state freeways and arterial roads. Council, however, is the responsible road authority for various assets within these road reserves where they form part of the urban road network within Towong Shire's townships.

Summary extracts from the asset registers are provided as follows:

- Schedule 4: State roads on which Council manages all or some of the Footpaths, Kerb & Channel, Parking bays.

2.9 Demarcation

The Road Register (Schedule 1) also refers to agreements with other road authorities where the road management responsibilities are transferred by agreement to the road authority which is maintaining the road.

The agreements specify the maintenance targets, inspection and recording procedures to be achieved by the responsible road authority.

Roads subject to such agreements are highlighted in Schedule 1.

3.0 Inspection targets

Inspections of the road assets are conducted on the following basis:

3.1 Condition Inspection

An independent condition assessment carried out on all road, footpath, kerb and channel, bridge and major culvert assets at intervals **not exceeding five years**, giving each asset a 0 (New) to 10 (beyond repair) rating at a component level and an assessment of the remaining useful life of the asset. This is then used to determine annual capital works programs in line with adopted levels of service. The Moloney Asset Management System is updated to reflect these ratings and to track the degradation rate of the assets, facilitating future renewal requirements. These condition assessments also provide an indication of the likely ongoing maintenance requirements.

3.2 Proactive Defect Inspection

Proactive defect inspections are performed by Council Officers on roads, bridges and footpaths on a regular schedule with all data recorded in Asset Asyst. The purpose of defect inspections is to ensure that the road assets do not deteriorate beyond the tolerable defect level. Defect inspection frequencies have been

determined following community consultation and having regard to potential hazard, the road classification and available resources.

The target inspection frequencies are shown in **Table 3.2 and 3.3** as follows:

Table 3.2 – Road target inspection frequency

Road Classification	Road Defect Inspection	Road Night Inspection
Link	3 monthly	12 monthly
Collector	6 monthly	12 monthly
Access	12 monthly	12 monthly

Table 3.3 – Bridges and footpaths target inspection frequency

Bridge Defect Inspection	Commercial Area Footpath Defect Inspection	Residential Area Footpath Defect Inspection	Off-road footpaths and cycle paths
12 monthly & after flooding	6 monthly	12 monthly	12 monthly

3.3 Reactive Defect Inspection

Reactive defect inspections are conducted in response to a perceived hazard or potential risk reported through Council's Service Request System or by a Council Officer or maintenance report. The urgency of the response will be directly related to the details provided by the Service Request System, Council Officer or maintenance report. In circumstances of multiple hazards and limited inspection resources priority will be given Commercial Footpaths and Link Roads.

Asset	Maximum timeframe for reactive defect inspection (all timeframes are in normal business hours)
Link Roads	72 hours
Collector Roads	72 hours
Access Roads	72 hours
Bridges	72 hours
Commercial Footpaths	72 hours
Residential Footpaths	72 hours

Reactive Defect Inspections will be carried out within the timeframes designated above from when the report is received. Actions will be taken to make safe, or provide appropriate warning following the inspection. The

timeframe for corrective actions will be determined based on the level of risk presented by the hazard at the time of inspection. Only hazards determined to present an extreme risk will be repaired on the same day as the inspection. Other repair works will then be programmed in accordance with the assessed risk and the maintenance targets in table 4.2.

4.0 Asset Standards

4.1 Design Targets

The minimum geometric design targets for roads and bridges for the different road classifications are set out in **Table 4.1** below.

The design targets represent the minimum standards to be met when reconstruction or replacement of the asset is undertaken. These are sourced from the Infrastructure Design Manual and Austroads Guidelines.

The existing assets are generally of a lower standard, and this standard will be maintained until any upgrade works are programmed.

Road Classification	Traffic Volume (vpd)	Seal Width (m)	Pavement Width (m)	Pavement Depth (mm)	Formation Width (m)	Bridge Width (m)	Bridge Design Loading
Urban Link	> 1000	6.2	7.0	250	9.2	7.4	SM1600
	500-1000	6.2	7.0	250	9.2	7.4	SM1600
	<500	6.2	7.0	250	9.2	7.4	SM1600
Urban Collector	> 150	6.2	6.6	200	9.2	6.6	SM1600
	50-150	4.0	4.4	200	7.0	6.2	SM1600
	<50	4.0	4.4	150	7.0	4.5	SM1600
Urban Access	> 150	6.2	6.6	200	9.2	4.5	SM1600
	<50	4.0	4.4	150	7.0	4.5	SM1600
	>50	4.0	4.4	150	7.0	4.5	SM1600
Rural Link	> 1000	6.2	6.6	250	9.2	7.4	SM1600
	500-1000	6.2	6.6	250	9.2	7.4	SM1600
	<500	6.2	6.6	250	9.2	7.4	SM1600
Rural Collector	> 150	6.2	6.6	200	9.2	6.6	SM1600
	50-150	4.0	4.4	200	7.0	6.2	SM1600
	<50	4.0	4.4	150	7.0	4.5	SM1600
Rural Access	> 150	4.0	4.4	200	7.0	4.5	SM1600
	<50	4.0	4.4	150	7.0	4.5	SM1600
	>50	4.0	4.4	150	7.0	4.5	SM1600

Table 4.1 Road Design Targets

4.2 Maintenance Targets

These maintenance targets have been established in accordance with the recommendations of a Best Value Review for roads which was carried out by a facilitated community consultation process during December 2011 and subsequent results of community satisfaction surveys.

The established targets represent a refinement of the previous maintenance standards balanced against the available road maintenance funding. Council will review the maintenance targets annually in response to community acceptance of the tolerable defect limits and annual funding limitations.

The maintenance targets and response times for the various road maintenance activities and road classifications are described fully in the **Table 4.2**

Table 4.2 **Schedule of Maintenance Targets**

Activity	Description/ Maintenance description	Intervention target	Maximum time to 'make safe' Response target (in normal business hours)	Maximum time to repair Response target after made safe (normal working days M – F)
Sealed pavements				
Pothole patching	Surfacing patching of potholes less than 0.25 sq m in travelled roadway using bituminous and other appropriate materials to restore the driving surface to a smooth condition.	Repair only when pothole exceeds 50 mm in depth or 350 mm in diameter, or is deemed likely to deteriorate rapidly.	Inspect and make safe within 5 days.	High Risk – greater than 50mm depth and or greater than 350mm diameter Repair within: Link 2 week Collector 3 weeks Access 4 weeks Medium and low risk – within 6 months (refer to annual works program)
Regulation of wheel ruts and depressions	Application of a levelling course of bituminous materials to depressed or rutted areas of pavement.	Regulate if rutting depression holds water or exceeds 25 mm in depth under a 1.2 m straight edge transverse, or under a 3 m straight edge longitudinal.	Inspect and make safe within 5 days.	Risk Assessment = High or above then Repair within 1 month. Otherwise refer to annual works program.
Crack sealing	The routing, cleaning and filling of cracks and joints using liquid bituminous sealants.	Seal cracks > 3mm.	Cracks > 30mm inspect and make safe within 5 days.	Risk Assessment = High or above then Repair within 6 months. Otherwise refer to annual works program.
Minor surface treatment	Application of bituminous materials and cover aggregate to areas of pavement with surface defects.	Treat when stripping (50% loss of aggregate), bleeding or crazing exceeds 5 sq m and the surface has not failed to the extent that it requires replacing.	Inspect and make safe within 5 days.	Risk Assessment = High or above then Repair within 6 months. Otherwise refer to annual works program.

Pavement cleaning	Cleaning of roadway including intersections and kerb & channel to remove debris.	Clean pavement (including kerb and channel) and intersections when the accumulation of aggregate, dirt and debris becomes a danger to traffic or pedestrians, or prevents the free drainage of the pavement.	Inspect and make safe within 5 days.	Risk Assessment = High or above. Rectify within 3 weeks.
Edge repair	Repair of broken edges of seal, to line and level, to maintain nominal overall seal width.	Repair when edge break exceeds 75 mm laterally over 1 m length.	Inspect and make safe within 5 days.	Risk Assessment = High or above then Repair within 3 months. Otherwise refer to annual works program.
Digouts	Treatment of isolated failed pavement areas by replacement with new approved material, or by improvement of existing material, including reinstatement of road surface.	Repair when failed area is greater than 0.25 sq m and other treatments have failed to solve the problem or other treatments are inappropriate.	Inspect and make safe within 5 days.	Risk Assessment = High or above then Repair within 12 months. Otherwise refer to annual works program.
Shoulder Sealed shoulder repair	Use the same parameters as for sealed pavement treatments (see above).	Use the same parameters as for sealed pavement treatments (see above).	Use the same parameters as for sealed pavement treatments (see above).	Risk Assessment = High or above then Repair within 3 months. Otherwise refer to annual works program.
Unsealed shoulder	Spot gravelling, grading and reshaping of unsealed shoulders to correct pavement drop off, rutting and build up of shoulder material.	Grade shoulders when the drop from edge of seal to shoulder exceeds 75 mm over 20 m length or shoulder becomes rough or scoured or there is holding of water.	Inspect and make safe within 5 days.	Risk Assessment = High Repair within 3 months Otherwise refer to works program.
Unsealed road				

Unsealed road grading	Spot gravelling, pothole repair, Grading or reshaping.	Grade unsealed roads when rutting, pot holing and corrugations exceed 50 mm over 30% of the road. Repair when pothole exceeds 75mm in depth or 450mm in diameter. Spot gravel to maintain two-wheel drive access.	Inspect and make safe within 5 days.	Risk Assessment = High Repair within 3 weeks Otherwise refer to the road maintenance program Note: These repair targets will not apply to unfenced roads or to sections of road used for regular stock movements except where adjacent landholder have met the requirements of the Council's Stock Grid Policy.
Drainage Surface drains	Cleaning and minor reshaping To maintain flow of water and protect road and roadside from scour.	Reshape when there is ponding in drains or the drain is not functioning to 75% capacity.	Risk Assessment = High Make safe within 5 days.	Risk Assessment = High or above then Repair within 4 months Otherwise refer to annual works program
Subsurface drains	Inspection of drains and cleaning of outlets and pits to maintain flow of water.	Inspect and clean subsoil drains annually.	Refer to program.	Risk Assessment = High or above then Repair within 4 months. Otherwise refer to annual works program.
Culvert and pit cleaning	Inspection and cleaning of culverts, pits and stormwater drains to maintain flow of water.	Annually or when debris inhibits free flow or if overflowing water is observed or reported.	Refer to program.	Risk Assessment = High or above then clean within 4 months.

				Otherwise refer to annual works program.
Stream maintenance	The maintenance and cleaning of debris from streams within 10 m of structure.	Any log debris >150 mm in diameter Any accumulation of debris greater than 400 mm deep.	Risk Assessment = High or above inspect within 5 days.	Risk Assessment = High or above then Repair within 4 months. Otherwise refer to annual works program.
Vegetation control	Control the growth of vegetation to maintain sight distance.	At intersections and 30 m either side of rest areas, around all road furniture, and in compliance with the Fire Prevention Plan.	Risk Assessment = High or above. Install hazard signs within 2 weeks.	Rectify within 2 months.
Edge trimming	Trimming of grass clear of kerbs to maintain drainage and appearance.	All growth forward of face of kerb.		Refer to program.

Tree and shrub management	Maintenance of roadside areas, including brush cutting, foliage trimming, use of herbicides and removal of vegetation.	<p>Cut tree limbs or remove trees when they become a danger to the public.</p> <p>Treat when:</p> <ul style="list-style-type: none"> • foliage growth obstructs visibility and reduces sight distance at intersections or to road signs; • foliage encroaches around structures or over footpaths, and; • new tree or shrub growth is within drains, the shoulder or verge. <p>Trim trees to maintain:</p> <ul style="list-style-type: none"> • minimum 1 m from back of shoulder and/or kerb, and; • minimum 5 m height clearance over shoulder and pavements. • Check NB town maintenance 	<p>Risk Assessment = High or above.</p> <p>Install hazard signs within 2 weeks.</p>	<p>Risk Assessment = High or above then Repair within 2 months.</p> <p>Otherwise refer to annual works program.</p>
Road furniture signs	Repair, re-instatement and cleaning of signs and supports.	<p>Straighten signposts when it becomes noticeable that they are not vertical, or replace.</p> <p>Clean when reflectivity is reduced due to accumulation of dirt.</p>		<p>Risk Assessment = High or above then Repair within 4 months.</p> <p>Otherwise refer to annual works program.</p>
Guardrail	The realignment, repair or replacement of isolated guard fence (<= 15 m sections).	Replace defective guard fence.		<p>Risk Assessment = High or above then Repair within 4 months.</p> <p>Otherwise refer to annual works program.</p>
Guideposts	The cleaning and/or replacement of damaged and missing guideposts, marker posts and delineators.	<p>When not visible from 150m at night, on low beam.</p> <p>When more than 10% of posts are missing or where more than two posts in a row are missing.</p>		<p>Risk Assessment = High or above then Repair within 4 months.</p> <p>Otherwise refer to annual works program.</p>

Pavement marking	The repainting of pavement markings and replacement of RRPM's.	When > 30% of markings for curves or barrier lines are worn through, or >10% of Regulatory markings are worn through, or >30% of RRPM's are missing.		Risk Assessment = High or above then Repair within 6 months. Otherwise refer to annual works program.
Footpath Paved island and footpath repair	Replacement, repair and regulation of defective paved areas.	Repair or replace hard paved areas where sunk, cracked, heaved when lips (i.e. a slope > 1:1) are \geq 20 mm. Grind when lips > 5mm and < 20mm.	Inspect and make safe within 5 days.	Risk Assessment = High or above then Repair within 2 months. Otherwise refer to annual works program.
Structures Bridge maintenance	The repair, cleaning and maintenance of decks, joints, Footings, abutments, wing walls, superstructure and any other works reported from annual inspections.	<u>Clearing and cleaning</u> * When any accumulation of material causes a hazard, inhibits the function of expansion joints, interrupts the escape of drainage water, is greater than 20mm deep or supports the growth of vegetation.	Inspect and install hazard signs 5 days.	Risk Assessment = High or above. Rectify within 2 months Otherwise refer to program as determined from annual inspection report.
		<u>Running surface (deck) repairs</u> * When 10% of the area of a timber running plank is defective or has holes greater than 150mm, or gaps between the planks are greater than 20mm width, or > 10% of planks are loose. <u>Minor repair and/or painting</u> * Where there is minor damage to concrete or timber elements that can be repaired without special scaffolds or materials.	Inspect and install hazard signs 5 days	Risk Assessment = High Rectify within 6 months. Otherwise refer to program as determined from annual inspection report.

		* When bridge rails/parapets, scuppers or other non-structural elements are visually faulty or loose. * Where painted rails/parapet surfaces have lost more than 20% of their effective protection.		
General Reinstatement of road openings	The reinstatement by utilities companies and private bodies of road openings caused by their work. To be carried out using appropriate materials.	All works carried out in accordance with current Infrastructure Design Manual standards and to the satisfaction of the appropriate Council Officer.	Risk Assessment = High or above. Utility company or private body expected to install hazard signs within 12 hrs.	Reinstate to previous condition within 1 week of works .
Emergency works and services	All emergency and incident management work including urgent reinstatement resulting from flooding, fires, cyclones traffic accidents etc. for safety.	Attendance and action required following call or detection to make safe only the damage that is deemed a hazard to traffic.	Risk Assessment = High or above. Make safe at time of inspection.	Repair within 6 months (dependent on resources and funding).
Litter control	Collection and removal of litter from within the road reserve.	When it presents a health hazard or is visually intrusive and no other mechanism under legislation is available to pursue the offending party.	Risk Assessment = High or above. Rectify within 2 days.	Low or medium risk Rectify within 1 month.
Rest areas (Council Maintained)	The routine clearance of rubbish bins and collection of litter throughout the Council Maintained rest area.	Empty rubbish bins and collect litter weekly.	Risk Assessment = High or above. Complete within 5 days.	Complete within 2 weeks.

Notes:

Specifications are based on Council's modified version of VicRoads Specification, Section 750

Response targets may be affected by prolonged periods of wet weather or severe storms. At these times, defects will be assessed, prioritised and programmed for treatment as soon as possible.

The maintenance targets will not apply for pavements, drainage and guideposts on unfenced roads and roads affected by regular stock movements unless the adjacent landholder is subject to and has satisfied the requirements of Council's Stock Grid Policy.

**Where response targets refer to “make safe” this may be achieved by the erection of appropriate warning signs.
ie. “rectify if possible or provide appropriate warning”**

5.0 Defect risk assessment methodology

5.1 Goal

To ensure assets are maintained, rehabilitated, and renewed with a view to **minimising risk** and **optimising life cycle**, at a sustainable level for present and future generations.

5.2 Inspections

Council sets inspection regimes for all asset classes at varying frequencies determined by combinations of the following aspects:

- Functionality of asset
- Usage of asset
- Deterioration rate of asset
- Resource availability

An example of this may be that an asset class with a slow deterioration rate may have an inspection frequency of every two or three years compared to an asset class that may deteriorate rapidly and thus become a risk in a shorter period of time if condition not detected.

Council maintains a history of when, and by whom, inspections were carried out on each asset.

5.3 Defect recording

Any defects detected during the inspection will be recorded in Council's asset register against the relevant asset.

Defects are recorded and assessed using criteria established by Council staff and management. Combinations of the criteria and statistical information recorded against each asset will enable prioritisation of works. After completion of works relevant details will be recorded against the defect.

Full histories of inspections and outstanding maintenance defects are included for each asset in the asset register. Completed works are then tracked through a works order system. The condition rating in the asset register is updated on a 5 yearly cycle using an independent assessor. This information will become vital in assessing efficiency and life cycle economy requirements.

5.4 Criteria

All defects will be assessed using the following three ratings:-

Likelihood Rating

The likelihood of the defect causing an incident.

The criteria for assessing likelihood are the number of contributing factors present.

A road defect may cause an incident due to the following contributing factors:

- Sight distance to the defect
- Deviation from travelling alignment and/or braking
- Lack of traction
- Hazard to other road users

Criteria	Likelihood Rating	Example Description
Total of four factors	A – Almost Certain	Is expected to occur in most cases.
Total of three factors	B – Likely	Will probably occur in many cases.
Total of two factors	C – Occasionally	Might occur in some cases.
One factor	D - Unlikely	May occur in a very few cases.
No factors	E – Rare	Could occur only in exceptional cases.

Consequence Rating

The severity or impact of the incident

- The physical factors that can influence the severity or impact of the incident
- The criteria for assessing the severity are the number of contributing factors present.
- The severity of an incident may be affected by the following contributing factors:
 - Width of road (more narrow = more severe consequences)
 - Road speed limit (higher speeds limits = more severe consequences)
 - Curved alignment (more or tighter curves = more severe consequences)
 - Structures or trees that may be impacted (more structure/trees = more severe consequences)

Consequence Rating	Criteria for severity	Example Description
5 – Catastrophic	A total of four factors	Permanent injury or death, huge financial loss, irreparable damage to property.
4 – Major	A total of three factors	Serious non-permanent injury, major financial loss, major detriment to health, major damage to property.
3 – Moderate	A total of two factors	Injury (medical treatment required), high financial loss, moderate detriment to health, moderate damage to property.
2 – Minor	One factor	Injury (self treatable – minor cuts or abrasions), medium financial loss, minimal detriment to health, minor damage to property.
1 – Insignificant	No factors	No injuries, low financial loss, no detriment to health, no damage to property.

Risk Analysis

Results from the **likelihood**, **consequence** ratings are added together to determine the risk score.

Likelihood + Consequence	Risk Category	Action	Recommended Time Frame for Inspection	Maximum time frame for action to make safe based on resource availability
0 to 3	Low	Monitor condition.	No work required, monitor as per inspection schedule	No work required, monitor as per inspection schedule
4 to 6	Moderate	To be programmed in regular maintenance schedule	Within 1 months	Within 2 months unless stated otherwise on table 4.2
7 to 9	High	Attention needed	Within 3 days	Within 5 days
10 to 12	Urgent	Urgent action required	Within 24 hours	Within 48 hours
13 to 15	Critical	Critical action required	Within 12 hours	Within 24 hours

Deprivation Rating

The asset lifecycle consequences of not rectifying the defect quickly.

The criteria for prioritising all low and moderate risk defects in both maintenance and capital work categories when resources aren't available to complete all works within one financial year.

The lifecycle consequences may be affected by the following contributing factors:

- o Increased cost to Council
- o Rapid deterioration of asset as a result of defect
- o Increased traffic hazard
- o Effect on other assets

These criteria are used to prioritise non urgent works where there are limited resources available to perform all works concurrently

Deprivation Rating	Criteria	Example
5 - Catastrophic	A total of four factors	Huge financial loss, threatens lifecycle of asset.
4 – Major	A total of three factors	Major financial loss, budget impacts high.
3 – Moderate	A total of two factors	High financial loss.
2 – Minor	One factor	Medium financial loss.
1 – Low	No factors	Low financial loss.

5.4 Hazard Assessment

The inspection of defects will include a risk assessment which will be used to prioritise maintenance programs in order to comply with the response times as specified in the maintenance targets.

The risk assessment procedure is documented in section 5 - **Defect Risk Assessment Methodology**

6.0 Asset Management System

6.1 Asset Renewal

The Moloney Asset Management System is used to record asset condition assessments.

The system is updated not more than every five years to include the current condition rating following the not more than every five years condition assessments. It is further updated annually on completion of the capital works program.

The modelling function of the system is used for future projections, depreciation and renewal gap reporting. Bridges will be independently assessed at a maximum of 10 years intervals due to the slow deterioration rate.

6.2 Asset Maintenance, Inspection and Repair

Towong Shire Council utilises the *RoadAsyst* Maintenance and Inspection Module (MIM) of the *AssetAsyst* and iform builder for the recording of inspections, defects and repairs.

6.3 Service Agreement

Towong Shire Council manages the maintenance of its roads with its in-house works team. Operations are carried out from depots at Tallangatta and Corryong. Additional works are supported by contractors when required.

Specifications are based on Council's modified version of VicRoads Specification, Section 750, and the schedule of **Maintenance Targets** as specified in the Agreement.

6.4 Service Request System

Towong Shire Council maintains a Service Request System to electronically record maintenance requests.

This system operates in conjunction with the *RoadAsyst* MIM to record all reported defects and the subsequent inspection and action taken.

6.5 Customer Research

Towong Shire Council carries out a range of community consultation activities to ensure that assets are meeting the needs of users and is committed to involving its community in determining acceptable levels of service.

Council has endeavoured to assess this through the following means:

- Best Value Review

- Road Shows
- Community Satisfaction Surveys
- Review of Service requests

Schedule 1 - Register of roads (highlight the ones listed up)

Seg I.D. No.	ROAD OR STREET NAME	SEGMENT DETAIL					Township Name Blanks are Rural	Road Status No.1	Road Register Class
